# 6. Adding to Pyth

Pyth is an enthusiastically open source project. If you’ve caught a bug, thought up a cool new idea, or want to add to the project in any way, you can do so via [Pyth’s Github page](#). If you want to leave a suggestion, file a bug a report or simply get help with the language, you can open an issue by clicking on “New issue” [here](#). If you’ve got some code you’d like add, you can do so via a pull request. For information on how to do so, [look here](#).

However you end up using Pyth, I hope you enjoy it.
